

Andrei Leganov

Senior iOS Engineer

Paphos, Cyprus • arickpost@gmail.com • Telegram: @arickxic • [LinkedIn](#) • [GitHub](#)

SUMMARY

Senior iOS Engineer with 7 years of commercial Swift experience, based in Cyprus. I build and ship consumer apps end-to-end: from architecture design (MVVM + Coordinator, modular SwiftUI, VIPER) to App Store release. Four apps live on the App Store; sole iOS engineer on two of them. Fintech experience across payments and financial planning products.

Comfortable owning the full delivery cycle — GitLab CI/CD, unit/UI test coverage, code review, performance monitoring, accessibility (VoiceOver, Dynamic Type). Daily hands-on use of AI tooling in the engineering workflow, with critical review of generated output.

SKILLS

Languages: Swift, Objective-C

AI & LLM Tooling: LLM product integration, prompt engineering, system prompts & behavioral rules, agent environments (Claude Code, Cursor), AI-assisted testing and code review

Architecture: MVVM + Coordinator, VIPER, Clean Architecture, SOLID, protocol-oriented programming, OOP, modular design

UI & Frameworks: UIKit, programmatic Auto Layout, SwiftUI (@Observable), SnapKit, Combine, Core Animation, MapKit, RxSwift, accessibility (VoiceOver, Dynamic Type)

Concurrency & Data: async/await, actors, GCD, memory management (ARC, retain cycles), CoreData

Monetisation: StoreKit, in-app purchases and subscriptions, paywalls, purchase restoration, entitlement handling, Stripe, Apple Pay

Growth & Analytics: feature flags (Firebase Remote Config), A/B testing and experiment analysis, analytics instrumentation (Firebase Analytics), Universal Links and deep linking, push notifications (APNs, Firebase Messaging)

Networking & Security: REST, WebSockets (Socket.IO), APNs, Keychain, Face ID / Touch ID, secure networking

Media & Camera: AVFoundation, AVCaptureSession, camera capture, video recording & editing

Tooling & QA: Git, GitLab CI/CD, XCTest, XCUITest, Instruments, Firebase, code review

EXPERIENCE

Senior iOS Engineer — The Doers Company LTD

April 2025 – Present • Limassol, Cyprus

Doers United — a professional networking app with AI-powered matchmaking, events, and real-time chat. Live on the App Store.

- Sole iOS engineer on the product — owned it end-to-end: architecture, implementation, App Store releases
- Built real-time chat and event features
- Built Jarvify, the company's AI agent platform (Chatbase competitor) — shipped the iOS chat client and contributed to backend and frontend
- Integrated LLM APIs into production: prompt engineering, system prompts and behavioral rules, and agent/tool configuration for multi-turn conversations
- Use AI-assisted development daily (Claude Code, Cursor): agent mode, rules files, AI-generated test coverage, and critical review of AI output
- Implemented in-app subscriptions with StoreKit: paywall flow, purchase restoration and entitlement handling
- Ran feature-flagged rollouts and A/B experiments, instrumented funnels and evaluated results after release
- Set up Universal Links end-to-end, routing web and campaign traffic into the relevant in-app screens

Team: Cross-functional product team — backend, Android, design, product. Only iOS engineer.

Stack: Swift, SwiftUI, UIKit, Combine, Swift Concurrency, LLM APIs

App Store: [Doers United](#)

Senior iOS Engineer — Anymaster LTD

October 2022 – April 2025 • Limassol, Cyprus

Anymaster.com — a marketplace for local services (repairs, delivery, cleaning) connecting users with verified providers, with in-app ordering and payments.

- Sole iOS engineer on the product — built the iOS client from scratch and owned it end-to-end: architecture, implementation, App Store releases
- Integrated Stripe payments (StripePaymentSheet) with Apple Pay — full in-app payment flow

- Implemented and maintained WebSockets (Socket.IO) for real-time chat and live order updates
- Designed modular MVVM + Coordinator architecture; covered code with unit/UI tests, tracked performance metrics, conducted code reviews
- Secure networking, push notifications (Firebase Messaging), Crashlytics monitoring, Google Maps / Places integration
- Built subscription purchases with StoreKit — paywall, restoration and entitlement checks
- Rolled features out behind flags and measured A/B experiments (Firebase Remote Config, Firebase Analytics)
- Configured Universal Links, including the apple-app-site-association file on the server side

Team: Small cross-functional product team — iOS, Android, backend, frontend, product design. Only iOS engineer.

Stack: Swift, SwiftUI, Combine, Moya, Socket.IO, Resolver, Firebase (RemoteConfig, Analytics, Messaging, Crashlytics), SnapKit, Kingfisher, Stripe, Apple Pay

App Store: [Anymaster: Services Near You](#)

iOS Developer — CodingTeam LLC

September 2021 – October 2022 • St. Petersburg, Russia

Custom software development studio. Contributed to two contract projects (both under NDA).

- iOS client for one of the region's largest classifieds and advertising platforms: feature development, refactoring, UI/unit tests, performance metrics, code review, sprint planning
- iOS client for a top-tier residential real estate developer — built from scratch and taken to release; one of the first engineers on the project. Universal Links and deep linking on both projects

Team: Advertising project: 12 people split into discovery and delivery — one of 3 iOS engineers. Real estate project: up to 11 iOS engineers.

Stack: VIPER, Swift, GitLab CI/CD, Universal Links, Alamofire, RxSwift, RxDataSources, Moya, Resolver, SnapKit, R.swift, SwiftLint

iOS Developer — 1312 inc.

April 2021 – September 2021 • St. Petersburg, Russia (remote)

B2B product company. Sole developer of the iOS client for Webasyst Cash Flow — a financial accounting, cash-flow and business planning application.

- Built the presentation layer (MVVM), unit/UI tests, code review
- Implemented financial data handling, charting and reporting for business cash flows; Universal Links for opening reports straight from the web

Team: Sole developer of the iOS application.

Stack: MVVM, Coordinator, Swift, RxSwift, RxDataSources, CoreData, Moya, iOS Charts, SnapKit

iOS Developer — CheckYou (later relaunched as Blink)

May 2019 – March 2021 • St. Petersburg, Russia

Social-networking startup. Contributed to three products.

- CheckYou & YTKA — social apps for check-ins, stories, chat, and friend tracking on the map: feature development, planning, code review, deep links for opening shared content in the app
- Built the stories feature — camera capture and a story-style viewer — with AVFoundation / AVCaptureSession
- Built a TikTok-style short-video editor for an AliExpress startup project: camera recording, video editing/processing, and a vertical swipe feed

Team: Startup team of 11 split into discovery and delivery — one of 2 iOS engineers.

Stack: MVC, Coordinator, Swift, Realm, IGListKit, SnapKit, MapKit, AVFoundation, FacebookSDK, VK-iOS-SDK

EDUCATION

GeekBrains — iOS Development course (2021)

Higher School of Technology and Energy — MSc, Heat-Power Engineering (2007–2010)

LANGUAGES

Russian — native • English — fluent
